OPEN INVITATION TO TENDER

AO/RPA/VKVET-NSOFRO/Real-time LMI/010/14

"Real-time labour market information on skill requirements: feasibility study and working prototype"

Request for Clarification (1) – Questions & Answers

Question No 1

We understand that the software that we will develop within the framework of the project will remain our own property and that Cedefop will use it under a licence contract/agreements, is it correct?

Cedefop's answer to question No 1

Page 20 of the Open invitation to tender AO/RPA/VKVET-NSOFRO/Real-time LMI/010/14 (Stage 2, WP 2) gives further information regarding acceptable development software:

"The system should be compatible with Cedefop IT systems and preferably make use of open-source software where feasible, though similar low cost solutions such as Website-Watcher are also acceptable".

The implemented system will become released under an open-source licence thereby ensuring that it may be further developed and extended over time without restriction by Cedefop or any third-party.
