

Forecasting of Developments of Labour Market Needs

Národný projekt: Prognózy vývoja na trhu práce

POLICY INSTRUMENT

 Slovakia

Description

Country

Slovakia

Focus area

MAIN SKILLS ASSESSMENT/ANTICIPATION INITIATIVE

The instrument aims to address skill mismatch in the economy. The initiative implements statistical models as tools for systematic monitoring of labour market needs, developments in skills mismatch, and skills supply/demand ratios at regional level, as well as with respect to graduates. It severs better understanding the developments in skills mismatch and disparities between the demand and supply of the labour market at a regional level by using statistical models to monitor the specific characteristics in the Slovak labour market.

Implementation level

NATIONAL

Legal base

Law

Starting period

2018-2021

Perspective

Forecasting is based on extensive micro-data collection and subsequent analysis of labour market demand, supply and mismatch at the level of regions, occupations and for young graduates. The analysis results in a document, which entails detailed information about expected development of occupations within sectors and regions. This output, for example, informs preparation of lists of fields of study in under/oversupply, which are used by regions to govern the structure of secondary VET.

Policy area

EMPLOYMENT

OTHER

Active Labour Market Policies

Funding

FUNDED BY THE EU

ESF

Skill mismatch

Skill mismatch target

OTHER

The instrument maps labour market demand and supply, and measures the degree of matching in order to inform policy decisions within the government (at the national and regional level).

Skills matching focus

MATCH YOUNG GRADUATES' SKILLS TO LABOUR MARKET

The mapping of labour market demand and supply, and skills mismatch may serve as baseline data for helping match skills of young graduates to market demand.

UPSKILL OR RESKILL EMPLOYED ADULTS

The mapping of labour market demand and supply, and skills mismatch may serve as baseline data for up- or reskilling adults already employed.

UPSKILL OR RESKILL NON-EMPLOYED ADULTS

The mapping of labour market demand and supply, and skills mismatch may serve as baseline data for up- or reskilling adults currently not in employment.

FACILITATE JOB / CAREER TRANSITIONS

The mapping of labour market demand and supply, and skills mismatch may serve as baseline data for supporting career transitions.

ADDRESS SECTORAL OR OCCUPATIONAL SKILL SHORTAGES

The mapping of labour market demand and supply, and skills mismatch may serve as baseline data for addressing sectoral or occupational skill shortages.

ADDRESS MISMATCH BROADLY

The mapping of labour market demand and supply, and skills mismatch may serve as baseline data for addressing skills mismatches for broader segments of the population, based on the decision of the ministry.

Methods

Methods

OTHER

Forecasting is based on extensive micro-data collection and subsequent analysis of labour market demand, supply and mismatch at the level of regions, occupations and for young graduates. The analysis results in a document, which entails detailed information about expected development of occupations within sectors and regions. This output, for example, informs preparation of lists of fields of study in under/oversupply, which are used by regions to govern the structure of secondary VET.

Use of skills intelligence

OTHER

Forecasting is based on extensive micro-data collection and subsequent analysis of labour market demand, supply and mismatch at the level of regions, occupations and for young graduates.

Stakeholders

Main responsible body

NATIONAL MINISTRY

Ministry of Labour, Social Affairs and Family of the Slovak Republic

Other involved organisations

SOCIAL PARTNER: EMPLOYER ORGANISATION

SOCIAL PARTNER: TRADE UNION

OTHER

Trexima private company undertaking data collection and analysis (procured)

Beneficiaries

OTHER

Beneficiaries include public policy makers (labour market policy, social policy, education and training policy), Public Employment Service, employers and employers' associations, schools and universities. The instrument provides respective beneficiaries with labour market intelligence that facilitates more informed decision-making. Policy makers use labour market forecasting to adapt labour market and training policy (Ministry of Labour, Family and Social Affairs; Public Employment Services) and education and training policy (Ministry of Education). Employers benefit

from the practice by being able to influence and benefit from a more favourable structure of secondary vocational education. Schools and universities can reflect the output of forecasting in the structure of their programmes.

Sustainability

Success factors	The interest of stakeholders in direct need of the project outcome
Barriers	Mistrust or lack of general awareness of the project's functions. Methodology has not been widely discussed with the wider expert base, e.g. academics in the field. Low capacity of some stakeholders (e.g. regions) hampers full use of the instrument.
Monitoring and evaluation	Indicators defined within the project are set-up at the level of the number of outputs (i.e. analyses/reports) produced. These have been formally fulfilled. Quality or impact in terms of use of forecasting results is not mapped.
Updates	<div>YES <i>Prognoses are prepared on an annual basis.</i></div>
Effectiveness	The estimated level of impact of the instrument is so far moderate. Some results are directly used for policy-making (e.g. regulation of IVET), but other aspects of analysis are at the moment less promoted (e.g. attractiveness of tertiary fields of study). The analytical outputs serve as partial input into various processes in the skill governance, such as the preparation of the lists of fields of study in an under/oversupply. For full impact, increased capacity of the involved actors and stakeholders as "end-users" to work critically with relatively complex data might be needed.
Sustainability	The initiative ended at the end of February 2021. The continuation of the programme in some form is guaranteed with high probability since forecasting of development of labour market needs remains within the core activities of the Ministry.
