Background

This is a key element of the Department of Further and Higher Education, Research, Innovation and Science's response to meeting construction skills needs and workforce requirements to meet the wider policy agenda in Ireland under the Housing for All strategy, and the National Development Plan (NDP).

Objectives

The aim of the Construction Safety Licencing Bill is to reform and modernise the existing model for the sector, to make construction an even safer industry to work in, and to make the industry more attractive to future workers.

Safety skills will be embedded into worker skills development, and make safety management easier for employers.

The legislation will also recognise workers who are not qualified (either through apprenticeship or professional qualifications), but have relevant construction skills to obtain a licence that recognises their skills, relevant to the individual's workplace activities.

The legislation allows a new licencing authority to be established, replacing the existing training model where qualifications are issued for life. Construction workers will have to hold a licence and renew the licence to keep their skills and training up to date. The new authority will keep a register of licensees and be the relevant authority to recognise qualifications achieved outside Ireland.

The Licencing Authority will also provide for the licencing of tutors to provide training relevant to construction safety.

Description

The legislation was developed as a matter of urgency following targeted consultation with key construction industry stakeholders in 2022. The draft legislation was published in 2023

and is progressing through the Irish Parliament to pass into law.

2023 Legislative process

The legislation was published in March 2023, and has been debated by the lower house of the Irish Parliament.

2024 Legislative process

This draft legislation continues its progress through the lower house of the Irish parliament. A public consultation on the proportionality of the legislation was held in August/September 2024, to seek the views of construction and quarrying sector workers, organisations and interested members of the public.

2025 Legislative process

The legislation is now at Fourth Stage - Report Stage in the lower house Irish Parliament.

To engage the industry, representatives from the Department of Further and Higher Education, Research, Innovation and Science and from SOLAS, the national agency for co-ordinating Further Education and Training took part in a panel discussion on the Construction Safety Licencing Bill and what it means for the industry as part of the Construction Industry Federation 2025 Health and Safety summit.

Bodies responsible

- Department of Further and Higher Education, Research, Innovation and Science (DFHERIS)

Target group

Learners

Older workers and employees (55 - 64 years old)
Unemployed and jobseekers
Persons in employment, including those at risk of unemployment
Low-skilled/qualified persons

Education professionals

Teachers
Trainers

Entities providing VET

Companies
Small and medium-sized enterprises (SMEs)

Other stakeholders

Social partners (employer organisations and trade unions)
National, regional and local authorities

Thematic categories

Governance of VET and lifelong learning

Coordinating VET and other policies
Further developing national quality assurance systems

Modernising VET offer and delivery

Modernising VET standards, curricula, programmes and training courses

Acquiring key competences

Reinforcing work-based learning, including apprenticeships

Transparency and portability of VET skills and qualifications

Developing and applying qualifications smaller/shorter than full

Supporting lifelong learning culture and increasing participation

Financial and non-financial incentives to learners, providers and companies

Providing for individuals' re- and upskilling needs
