

Making informed choices on digital education content

EU guidelines for teachers and educators

Description

The new EU guidelines on digital education content support teachers and educators at selecting, creating and using digital resources - known as “digital education content”- that are safe, reliable and effective for teaching, learning, and assessing learner performance.

They provide a step-by-step guide to select, create, adapt, and evaluate digital materials, practical examples based on real-school simulations, and support to strengthen digital competences and professional development. These guidelines also propose a list of quality evaluation criteria teachers and educators can use to assess digital resources.
