CHAPTER 1.

Summary of main elements and distinctive features of VET

VET in Estonia comprises the following main features:

- slightly decreasing participation in VET and merging providers due to demographic and migration challenges;
- rapidly developing but still relatively small share of dual VET;
- there are more females in post-secondary VET than males;
- early leaving from education and training has increased and it is still high from VET; the risk is the highest in the first year of VET studies.

Distinctive features ([1]):

VET programmes are offered not only in Estonian but also in other languages. In 2017/18, 78.5% of VET learners studied in Estonian, 21.5% in Russian and 0.02% in English. Estonian language classes are mandatory for foreign-language curricula to the extent provided for in the school curriculum, which ensures proficiency in Estonian at a level necessary for working in the acquired profession. To complete upper secondary vocational education (ISCED 354), foreign language learners must pass the State examination in Estonian as a second language or take a vocational or professional examination in Estonian. The aim is to equip graduates with language skills sufficient for professional activity in an Estonian-language working environment.

Although the number of VET learners has been decreasing, the share of adult learners (age 25 and over) in initial and continuing VET has more than doubled since 2010/11, reaching 35.3% of the total VET population in 2017/18. This reflects demographic trends but also changing labour market needs. Since 2010, the proportion of adult university degree holders entering VET has also been increasing.

The share of work-based learning in VET programmes varies between 35% and 70% depending on the type of training. It is usually divided equally between school workshops and workplace learning, featuring work and study assignments with specific objectives.

Most basic education graduates pursue general secondary education but the government’s goal is to increase the share of learners enrolling in VET by 2020. Preferences in education paths vary greatly by region and gender. Many basic and upper secondary education graduates make a choice in favour of VET within several years after graduation; within three years after completion of basic school, 38% of young people reach vocational training.
CHAPTER 2.

Main challenges and policy responses

In 2018, 27% of adults aged 25 to 64 had no VET or higher education qualification; the objective is to reduce this share to less than 25% by 2020. Several measures have been launched to encourage adults without a prior professional or vocational qualification to return to formal education.

There is a high level of skills mismatch. A labour market needs monitoring and forecasting system (OSKA) was launched in 2015 to improve alignment between education and the labour market. Results are available online and are used in curriculum development, career counselling, and planning of State-funded education.

Early leaving from VET is a significant problem. Compared with 11.3% of early leavers from education and training, the rate in the first year of initial VET was 22.4% in 2017 and 23.4% in 2018 ([2]); the goal is to reduce it to less than 20% by 2020. There are career counselling services and several other measures to prevent early leaving. Schools are also expected to take more responsibility in this area. Keeping the most vulnerable learners in VET programmes is a challenge.

Participation in lifelong learning increased from 6% in 2005 to 19.7% in 2018. The goal is to increase it to 20% by 2020 and VET has been playing a greater role in achieving this. Age appears to have a substantial impact. The share of people aged 55 to 64 who participated in lifelong learning in 2018 was 10.5%; this is low compared with 28.2% in the 25 to 34 age group. There is a focus on broadening access to non-formal education, training courses for developing key competences, career services, and on facilitating the participation of adults in formal education, aiming to increase participation rates.

Participation in apprenticeships has increased since 2016/17 and now accounts for 7% of VET learners. The number of participants started to increase gradually in 2015 following the education ministry’s efforts to develop a functioning and sustainable work-based learning system with stronger employer involvement, including more ESF investments.

Data from VET in Estonia Spotlight 2017 ([3]), updated in May 2019.

CHAPTER 3.
External factors influencing VET

3.1. Demographics

Population in 2018: 1 319 133 ([4])

It decreased since 2013 by 0.08% due to negative natural growth and migration ([5]).

As in many other EU countries, the population is ageing.

The old-age dependency ratio is expected to increase from 29 in 2015 to 56 in 2060 ([6]).

Demographic changes have an impact on vocational education and training (VET).

Participation has been decreasing since 2010/11 due to the low birth rate in the second half of the 1990s.

This has led to rearrangement of the VET institutions network: the number of State-owned VET providers has been reduced from 54 in 2002/03 to 26 in 2018/19.

To increase the quality and efficiency of VET, many small providers were merged into regional VET

Source: Eurostat, proj_15ndbims [extracted 16.5.2019].
centres offering a wide range of qualifications. Adjustments will continue in line with demographic trends.

The country is multicultural and has a bilingual community. In April 2018, about 69% of the population was Estonian. Most VET institutions teach in Estonian, though there are schools where they use Russian or both Estonian and Russian.

3.2. Economics

Most companies are micro- and small-sized.

Main economic sectors:
- information and communications;
- electronics and components;
- machinery and metalworking;
- transport and logistics;
- timber and furniture.

VET qualifications are required in these sectors.

Exports mainly comprise electronic equipment, machinery and equipment, mineral products, metals and metal products, timber and wood products, food and transport vehicles, agricultural products and food preparations.

3.3. Labour market

A limited number of occupations/professions is regulated and the labour market is considered flexible.

Total unemployment ([7]) in 2018: 4.8% (6.0% in EU-28); it increased by 0.2 percentage points since 2008 ([8]).
Unemployment is distributed unevenly between those with low- and high-level qualifications. The gap has increased during the crisis as unskilled workers are more vulnerable to unemployment. In 2018, the unemployment rate of people with medium-level qualifications, including most VET graduates (ISCED levels 3 and 4) was higher than in the pre-crisis years. It is lower compared to the total unemployment rate ([9]) in Estonia (4.8% in 2018).

Employment rate of 20 to 34 year-old VET graduates decreased from 79.4% in 2014 to 79.1% in 2018 ([10]).
The increase (-0.3pp) in employment of 20-34 year-old VET graduates at ISCED levels 3 and 4 in 2014-18 was negative compared to the increase in employment of all 20-34 year-old graduates (+3.5pp) in the same period in Estonia ([11]).

The employment rate of 20-34 year-old VET graduates at ISCED levels 3 and 4 in 2018 in Estonia (79.1%) was lower compared to the employment rate of all 20-34 year-old graduates in the same year in Estonia (79.5%) ([12]).

For more information about the external drivers influencing VET developments in Estonia please see the case study from Cedefop’s changing nature and role of VET in Europe project [12a]

[6] Old-age-dependency ratio is defined as the ratio between the number of persons aged 65 and more over the number of working-age persons (15-64 years). The value is expressed per 100 persons of working age (15-64).
[7] Percentage of active population, 25 to 74 years old.
[9] Percentage of active population, 25 to 74 years old.
CHAPTER 4.

Education attainment

4.1. Share of high, medium and low level qualifications

Education traditionally has a high value in Estonia. For many years, the share of the population aged up to 64 with higher education has been greater in Estonia than in most EU Member States. The share of those with a low qualification, or without a qualification, is the sixth lowest in the EU, behind Lithuania, Czechia, Poland, Slovakia, and Latvia.

![Population (aged 25 to 64) by highest education level attained in 2018](image)

NB: Data based on ISCED 2011. Low reliability for ‘No response’ in Czechia, Iceland, Latvia, and Poland.
ISCED 0-2 = less than primary, primary and lower secondary education.
ISCED 3-4 = upper secondary and post-secondary non-tertiary education.
ISCED 5-8 = tertiary education.

4.4. Female share

Traditionally, there are more males in VET (53%), except at post-secondary level.

Males prefer engineering (the most popular option), manufacturing and construction, science, and services programmes, while females more often enrol in services (the most popular option), business and administration, production and processing, and arts.

4.5. Early leavers from education and training

The share of early leavers from education and training has decreased from 13.5% in 2009 to 11.3% in 2018. Despite high attainment rates, it is still not reaching the national target for 2020 of no more than 9.5%, and is slightly above the EU-28 average (10.6%).
Despite recent positive developments, the dropout rate ([13]) from VET during a school year is high (23.4% in 2017/18). The risk of dropping out is at its highest in the first school year and the challenge for VET providers is to keep the most vulnerable learners in VET programmes. Typical examples of dropout are those who had low grades in basic education ([14]) and may not have had a positive learning experience or had not developed study habits. Dropout rates also vary by region, school and curriculum group.

4.6. Participation in lifelong learning

Lifelong learning offers training opportunities for adults, including early leavers from education and training.
Participation in lifelong learning in 2014-18

Participation in lifelong learning in Estonia has been increasing in the past decade. In 2018, it reached 19.7%, more than eight percentage points above the EU-28 average. The government has set the 2020 goal of 20% and VET has been playing an increasing role in achieving this goal.

4.7. VET learners by age
The share of adults (aged 25 and above) in initial and continuing VET has been increasing. It has more than doubled since 2010/11 and reached 39.6% of the total VET population in 2018/19. This reflects demographic trends and the changing needs of the labour market, but also the changing attitudes towards lifelong learning.

[13] Measured on 10 November each year; excludes those who: attended classes less than 31 days, were readmitted within 31 days, applied but never attended or who changed programme in the same curriculum group and in the same institution.

[14] See Chapter 2 for the information on education levels.
CHAPTER 5.

VET within education and training system

The education and training system comprises:

- preschool education (ISCED level 0);
- integrated primary and lower secondary education (ISCED levels 1 and 2) (hereafter basic education);
- upper secondary education (ISCED level 3);
- post-secondary non-tertiary education (ISCED level 4);
- higher education (ISCED levels 6, 7 and 8).

Preschool education is not compulsory and is generally provided at childcare institutions (koolielne lasteasutus) for one-and-a-half to seven year-old learners.

Compulsory education starts at age seven and includes nine years of basic education or until a learner reaches age 17. Primary and lower secondary education are usually offered together in basic schools. However, primary education (grades 1 to 6) can also be offered in separate schools, usually in rural areas to ensure better accessibility for learners.

General upper secondary education is provided by so-called gümnaasium. This three-year programme gives graduates access to higher education, provided through academic and professional programmes. Professional higher education programmes are not formally considered VET. Professional higher education institutions may also provide post-secondary VET programmes along with higher education.

The Vocational Educational Institutions Act ([15]) distinguishes between initial and continuing VET.
While both types provide the knowledge, skills and attitudes necessary to enter the labour market, initial VET also gives learners access to the next qualification level. Non-formal continuing VET is part of adult learning regulated by the Adult Education Act ([16]).

Formal VET leads to four qualification levels (2 to 5) that are the same as in the European qualifications framework (EQF). The VET standard specifies the volume (number of credits), learning outcomes, conditions for termination and continuation of studies for each VET type ([17]).

There are several VET learning options:

- school-based learning (contact studies, including virtual communication with the teacher/trainer);
- work practice (practical training at school and in-company practice);
- self-learning (excludes work practice; at least 15% of a programme should be acquired through autonomous learning; if it exceeds 50%, the programme is considered to be ‘non-stationary’; 17.2% of VET learners were in ‘non-stationary’ programmes in 2017/18, mostly at EQF levels 4 and 5).

Apprenticeships were introduced to VET as a stand-alone study form in 2006.
Upper secondary VET learners receive two qualifications simultaneously: a formal education qualification awarded after completion of a programme; and a professional qualification that is a professional certificate verifying learning outcomes for a specific occupation or profession ([18]). We will refer to them as VET qualifications and professional qualifications.

To complete a VET programme, learners need to pass a professional qualification examination, if available. That can be replaced by a final examination if unsuccessful in the professional qualification examination. Both examinations are learning outcomes based and usually include a practical part.

In addition to VET examinations, State examinations (mother tongue, mathematics and foreign language) are available for upper secondary VET graduates as an option. They are organised centrally by the Foundation Innove ([19]).

---

Apprenticeship

Apprenticeships (töökohapõhine õpe) were introduced in 2006 (Parliament, 2013, Article 28). They can be offered at all VET levels and in all its forms (initial and continuing), and lead to qualifications at EQF levels 2 to 5. Apprenticeships follow the same curricula as school-based programmes. VET institutions cooperate with employers to design implementation plans for apprentices based on the existing curricula.

General characteristics of apprenticeship programmes are:

- training in the enterprise comprises at least two-thirds of the curriculum;
- the remaining one-third of the programme (school part) may also comprise of training at school; in some cases, schools have better equipment than companies;
- the apprenticeship contract between the school, learner and employee stipulates the rights and obligations of the parties as well as the details of the learning process; the contract is usually initiated by schools, but can also be proposed by companies and learners; it should be in accordance with the labour code but learners retain student status even if an employment contract is signed in addition to the apprenticeship contract; apprentices have the same social guarantees as learners in school-based VET;
- the total study duration is from three months to three and half years (20), equal to school-based VET programmes;
- employers recompense students for tasks performed to the amount agreed in the contract; it cannot be less than the national minimum wage of EUR 500 per month or EUR 2.97 per hour (2018);
- apprentices have to pass the same final examinations as in school-based VET;
- each apprentice is supported by two supervisors: one at school and one at the workplace.

The apprenticeship grant covers the training of supervisors and other costs (21). Within an apprentice contract, schools may transfer up to 50% of the grant to the training company to pay a salary to supervisors at the workplace.

In 2015/16, there were 678 apprentices, including 30 whose studies were partly financed by the European Social Fund (ESF). In 2016/17, further ESF investment has allowed an increase in the number to 1 381 (5% of VET learners), including 996 of the partly ESF-financed apprentices (22). In 2017/18, there were 1 718 apprentices. A total of 78% of vocational education institutions and around 400 companies offered apprenticeship training. During 2015-23, the government’s intention is to attract a total of 7 200 apprentices.

The most popular apprenticeship study fields (curriculum groups) are wholesale and retail sales, social work and counselling, hairdressing and beauty services, motor vehicles, home services, and electricity and energy. Approximately 70% of apprentices are studying in initial and continuing VET programmes leading to EQF level 4.

[20] Currently, apprenticeships are not provided in upper secondary VET (ISCED 354).
[21] Salaries, training materials and maintenance (such as heating and electricity).
[22] More partly EU-financed apprentices started training in January 2017 but they are not included in this figure.
CHAPTER 7.

VET governance

According to legislation ([23]), the parliament (Riigikogu), the government (Eesti Vabariigi Valitsus) and the education ministry jointly oversee the VET system at national level. The VET legislation was substantially renewed in the late 1990s and in 2013. Social partners, including trade unions and employer organisations participated in the working group on developing legislation.

The parliament adopts legal acts. The government approves national education policy, with the Estonian lifelong learning strategy 2020 ([24]) guiding the most important developments in education. It also approves higher education and VET standards and framework requirements for teacher training.

The VET standard ([25]) defines:

- a learning outcomes approach;
- requirements for VET curricula;
- the volume and structure of programmes, including joint programmes, for example between VET and professional higher education;
- entry and completion requirements;
- key competences;
- principles for curriculum updates;
- principles for recognition of prior learning and work experience;
- the list of programme groups, study fields and curriculum groups combining several programmes. Examples of the curriculum groups are ‘travel and tourism’, ‘social work’ and ‘banking, finance and insurance’.

The education ministry is responsible for delivering the strategy and its eight programmes ([26]), including the vocational education programme ([27]). The education minister also approves national VET curricula.

Since 2012, Foundation Innove ([28]) has been implementing the national education policy, as designated by the education ministry. In VET, the foundation organises the development of national curricula, supports implementation and organises VET teacher training.

Several advisory bodies and social partner organisations participate in policy implementation. Local government prepares and implements local education development plans, and coordinates activities of municipal education institutions. Social partner participation in VET is regulated by national legislation and partnership agreements.

At national level, the Chamber of Commerce (Eesti Kaubandus-Tööstuskoda), the Employers’ Confederation (Eesti Tööandjate Kesklid) and the Confederation of Trade Unions (Eesti Ametiühingute Kesklid) represent social partners. Employers play an active and influential role in the professional councils (kutsenõukogud) and in drawing up standards for each occupation.

At local level, social partners participate in VET school counsellor boards (kutseõppeasutuse nõunike kogu), established under the Vocational Educational Institutions Act ([29]). The boards comprise at least seven members in total. Advisory bodies link VET schools and society, advising the school and its management on planning and organising education and economic activities.

VET schools can be owned by central or local government, or can be privately owned. They all have a similar management structure in line with the Vocational Educational Institutions Act ([30]). The highest collegial decision-making body of the school is the council (nõukogu), which organises
the activities and plans school development. The head of a school (direktor) is also the head of the council, managing the school according to the development plan of the school, including financial resources ([31]).

In 2018/19, 26 of 32 VET institutions were State-owned and run by the Ministry of Education and Research. Municipalities ran two VET schools and four were private. In addition, five professional higher education institutions provided VET programmes at the post-secondary level (ISCED 4) along with higher education (ISCED 6).

[26] (1) Competent and motivated teachers and school leadership programme; (2) digital focus programme; (3) labour market and education cooperation programme; (4) school network programme; (5) general education programme; (6) vocational education programme; (7) higher education programme; (8) adult education programme.

[28] Until the end of 2011 this function was performed by the National Examinations and Qualifications Centre (NEQC) (Riiklik Eksami- ja Kvalifikatsioonikeskus). In 2012, NEQC joined Foundation Innove.

CHAPTER 8.  
VET financing mechanisms

Total expenditure on VET has decreased from EUR 129 million in 2010 to EUR 108.6 million in 2015 due to reduced investment in infrastructure and equipment as several big VET investment projects have been completed.

NB: Most recent data.
Source: State Accounting Balances System (UOE methodology) [extracted 18.5.18].

Public VET expenditure as a share of total government expenditure has also decreased, from 1.6% in 2012 to 1.3% in 2015, because total government expenditure has increased nominally more than the expenditure on VET. Approximately 49% of total expenditure is expenditure on staff compensation.

Formal VET is mostly State-financed. In 2018/19, 99% of the 23 387 initial and continuing VET learners were in State-financed programmes.
Until 2018, the education minister defined the number of learners to be financed from the State budget for the following three years according to curriculum group and VET provider (for example ‘media technologies’ that comprises curricula from related fields such as ‘multimedia’, ‘printing technology’ and ‘photography’). The figures were updated annually for the next two years.

Since 2018, a new model for financing vocational education was introduced, which no longer proceeds solely from the number of State-commissioned student places. Instead, the school, its activities and performance will be financed as a whole.

The new financing model consists of basic financing and performance-based financing. This secures the budgetary stability of the management and HR expenses of schools.

Basic financing considers the number of learners, the areas taught, the salary rates of teachers, the specific features of specialties, students with special needs, the need for support specialists, and the buildings used by the school. Basic financing is fixed for three years and guarantees the funds required for the main activities of the schools.

Performance-based financing, which values the outstanding achievements of schools, is based on performance indicators, which comply with the strategic goals important to the State. These include the share of students who graduate after the nominal period of study, the share of graduates who go further in their learning or participate in employment, the share of students who graduate by taking a professional examination, and the share of students participating in apprenticeship training. One of the ideas behind performance financing is to guarantee that
vocational schools have the funds they need for cooperating with companies and general education schools. Performance financing will comprise up to approximately 20% of the money the school receives from the State budget.

A few privately financed VET programmes are available in State and municipal VET schools. Such programmes are usually in high demand (as with cosmetician programmes) but are not part of the State-financed programmes.

Apprenticeships are also co-financed by ESF.

State and municipal vocational schools may provide continuing training for adults for a fee without age restrictions. They can also attract additional financing from other sources, such as international projects.
CHAPTER 9.
Teachers and trainers

9.1. VET teacher types

In VET, there are:

- general subject teachers;
- vocational teachers.

The Vocational Educational Institutions Act ([32]) uses the term ‘teacher’ for both teachers and trainers. The Act specifies that qualification requirements of VET teachers are determined by the professional standards of a teacher or a vocational education teacher. There are different standards at different EQF levels for general education subject teachers and vocational teachers in VET.

General education subject teachers can work in VET but also in general education schools. They require a master’s degree (also called ‘second cycle higher education diploma’) equal to 300 ECTS ([33]) credits and teach, for instance, mathematics, physics and languages.

Vocational teachers offer knowledge and skills in the field of their professional expertise (the so-called ‘speciality subjects’). Qualification requirements are more varied and at different EQF levels compared to teachers of general education subjects, allowing more flexibility for professionals who want to teach. This also improves the link to the labour market. The professional standard of vocational education teacher ([34]) (kutseõpetaja) defines three qualification levels (EQF levels 5, 6 and 7). According to the professional standards, a VET provider cannot employ more than 20% of staff with the lowest level qualification (at EQF level 5).

Teachers are employed through contracts. The head of a school concludes, amends and terminates employment contracts with teachers in accordance with the labour code. Employment contracts are of indefinite duration; reduced working time (35 hours per week) applies.

The lifelong learning strategy up to 2020 supports creating conditions for competent and motivated teachers as one of its five strategic goals. It aims at offering competitive wages and working conditions, leading to a positive image of a teacher in society. Since 2014, the basic salary of teachers has been constantly raised and has passed the average salary in Estonia. This is a strategic decision and political priority ([35]).

Currently, the teaching profession is not an attractive option for young people. The highest share of VET teachers (51.7%) are aged 50 and above ([36]) and their share has been increasing in the past decade. Most VET teachers are female; however, the share of males in VET (39%) is more than double the share in general education.

9.2. Continuing professional development of teachers/trainers

The Vocational Educational Institutions Act ([37]) stipulates that each teacher is obliged to self-monitor their professional competences and upskill their personal needs. Self-evaluation is done annually and discussed with their immediate head. This approach takes account of teachers’ individual needs depending on their current competences and tasks and the needs of VET providers. This approach applies to all VET teachers.

Teacher practice at an enterprise or institution ([38]) may also be counted towards continuing professional development. It is professional work performed in a work environment with a specific purpose and has a direct link with the teachers’ area of expertise. Teachers are excused from
teaching during practice.

The leading continuing professional development providers are universities, followed by VET providers, private companies and foundation courses.

More information is available in the Cedefop ReferNet thematic perspective on teachers and trainers ([39]).

CHAPTER 10.
Shaping VET qualifications

10.1. Anticipating skill needs

Anticipation of skill needs in the Estonian labour market is based on labour market forecasts by the economics ministry ([40]), updated annually since 2003. They show demand in the national economy for employees by sector and qualification level. Forecasts are based on the data of the 2011 population census and labour force surveys conducted by Statistics Estonia. They cover 39 economic (sub)sectors and five major professional groups:

- managers;
- specialists;
- service staff;
- skilled workers;
- unskilled workers.

The forecasts reflect changes in employment and the need to replace employees leaving the labour market. The latest forecast considers the period 2017-26 ([41]).

In 2015, the education ministry launched a new labour market needs monitoring and forecasting system, known by its Estonian acronym OSKA. Managed by the qualifications authority (Kutsekoda), it assesses skill needs by economic sector (such as information and communications technology, accounting) and develops new evidence and intelligence for stakeholders in education and the business world. The system comprises 23 expert panels of employer representatives, education professionals, researchers, public opinion leaders, trade unions and policy-makers. By 2020, each panel representing one sector will publish a report with practical recommendations for decision-makers and stakeholders.

The first five OSKA reports on accounting, forestry and timber industry, information and communications technologies (ICT), manufacturing of metal products, machinery and equipment, and social work were published in 2016. Another six sectors were covered in 2017: construction; energy and mining; healthcare; production of chemicals, rubber, plastic and construction materials; the agriculture and food industry; and transportation, logistics and repair of motor vehicles. An additional five sectors were covered in 2018 ([42]). Based on the sectoral reports, a 10-year forecasting report on changes in labour market demand, developments and trends is updated and presented to the government annually. The forecasting results are used for career counselling, curriculum development and strategic planning at all education levels, including vocational education and training (VET).

See also Cedefop’s skills forecast ([43]) and European Skills Index ([44])

10.2. Designing qualifications

Initial and continuing VET qualifications are based on professional (occupational) standards that are part of the professional qualifications system.
Professional standards

Professional standards are used for designing VET curricula, curricula for higher education and other training programmes, for assessing learner competences, and awarding a professional qualification. They:

- are based on a job analysis and describe the nature of work; analyses are carried out by working groups designing professional standards;
- describe expected competences as observable and assessable;
- define the method(s) for assessing learner competences and a ‘satisfactory’ threshold;
- define qualifications (EQF) levels.

All professional standards are available in the State register ([45]). In May 2019, the State register of professional qualifications included 555 professional standards in 93 professional areas.

VET qualifications

Uniform requirements for VET curricula and qualifications are stipulated by the VET standard ([46]). The standard:

- describes the requirements for national and school curricula and the curriculum groups in line with ISCED levels, their objectives and expected learning outcomes;
- determines the terms and conditions for recognising prior learning, volume of study and graduation requirements by initial and continuing VET curricula;
- defines requirements for teachers and trainers;
- assigns the national qualifications framework levels to VET qualification types.

Source: Cedefop based on ReferNet Estonia.
VET schools design curricula for every qualification offered.

Upper secondary VET programme curricula that give access to higher education are based on the national curricula. National curricula are based on professional standards, the VET standard and the national (general education) curriculum for upper secondary schools. Foundation Innove coordinates the process of curriculum design, including cooperation with social partners.

Other VET curricula are based on the VET standard and the respective professional standard(s). Where such standards do not exist, the school must apply for the curriculum to be recognised by social partners.

The vocational orientation curriculum (legal framework introduced in 2018) is not required to correspond to a certain professional standard. This facilitates transitions from compulsory education to VET and/or the labour market, especially for vulnerable groups.

National upper secondary VET curricula that give access to higher education are approved by the education minister.

The VET standard determines how learning outcomes of modules are described:

- profession-specific knowledge are facts and theories acquired through the learning process;
- profession-specific skills are the ability to apply knowledge for performing tasks and solving problems; skills are described in terms of their complexity and diversity;
- autonomy and responsibility describe to what extent the graduate is able to work independently and take responsibility for the results of work;
- learning skills are the ability to manage the learning process using efficient strategies and appropriate learning styles;
- communication skills are the ability to communicate in different situations and on different topics orally and in writing;
- self-management competence is the ability to understand and evaluate oneself, give sense to one’s own activities and behaviour in society, develop oneself as a person;
- operational competence is the ability to identify problems and solve them, plan one’s own activities, set goals and expected results, select adequate tools, act, evaluate the results of one’s own actions, cooperate with others;
- ICT competence is the ability to use ICT tools and digital media skilfully and critically;
- entrepreneurship competence is the ability to take initiative, act creatively, plan one’s own career in the modern economic, business and work environment, apply knowledge and skills in different spheres of life ([47]).

Managing qualifications

Several bodies are involved in designing, updating and awarding qualifications:

- the education ministry;
- professional councils;
- awarding bodies;
- qualifications committees;
- assessment committees.
The education ministry is responsible for developing a professional qualifications system. This task is delegated to the qualifications authority (Kutsekoda), a private foundation led by a council comprising representatives of the: Chamber of Commerce and Industry; Employers' Confederation; Employees' Unions Confederation; Confederation of Trade Unions; and the education, finance, economic and social affairs ministries. The qualifications authority organises and coordinates the activities of professional councils and keeps the register of professional qualifications.

Professional councils represent 14 job sectors. The councils approve and update professional standards and are represented equally by trade unions, employer organisations, professional associations and public authorities. Chairs of professional councils form a board of chairmen for these councils to coordinate cooperation between them.

Professional councils select awarding bodies (public and private) to organise the assessment of competences and issue qualifications. The awarding bodies are selected for five years through a public competition organised by the qualifications authority. VET providers may also be given the right to award qualifications, if the curriculum of the institution complies with the professional standard and is nationally recognised. Qualifications are entered into the register of professional qualifications. As of 2019, there were a relatively large number of institutions (108) awarding professional qualifications.

The awarding body sets up a committee involving sectoral stakeholders: employers, employees, training providers, and representatives of professional associations. It often also includes customer representatives and other interested parties. This ensures impartiality in awarding qualifications. The committee approves assessment procedures, including examination materials, decides on awarding qualifications, and resolves complaints.
It may set up an assessment committee that evaluates organisation and the results of the assessment and reports to the qualifications committee.

The assessment committee verifies to what extent the applicant’s competences meet the requirements of the professional qualification standards. The assessment criteria are described in the rules and procedures for awarding the qualification or in the respective assessment standard ([48]).

A person’s competences can be assessed and recognised regardless of whether they have been acquired through formal, non-formal or informal learning.

[40] Ministry of Economic Affairs and Communications.
[42] Apparel, textile and the leather industry; human resources, administrative work and business consultation; education and research; trade, rental and repairs; accommodation, catering and tourism.
CHAPTER 11.

Quality assurance

VET quality is assured through external and internal processes that do not differentiate in their approach between school-based learning, work-based learning, self-learning (including ‘non-stationary’) ([49]) and apprenticeships.

**External quality assurance**

External quality assurance of schools’ curriculum groups ([50]) is confirmed by awarding the ‘right to offer VET programmes’.

Following changes in the approach to learning and teaching, the approach to quality assurance (i.e. external assessment process) was changed in 2019. The former extension of the right to provide instruction based on the accreditation results in the curriculum group was replaced with a permanent right to provide instruction in curriculum groups, where schools have accreditation for the full period (six years).

The external assessment is organised by the Quality Agency for Higher and Vocational Education (EKKA). A quality assessment in curriculum groups will take place once in six years and the result of the assessment is not directly connected with the right to provide studies. The process is more focused on achieving constant improvements in the teaching and learning process and the development of quality culture at school.

An assessment of the right to provide instruction, giving a school this right for a term of three years, shall be conducted in curricula groups, and repeated if necessary, by 31 August 2019. The minister responsible for the area shall make one of the following decisions:

- to grant the right to provide instruction without a term;
- to grant the right to provide instruction for three years;
- not to grant the right to provide instruction.

A school that has received the right to provide instruction in a curriculum group for a specified term, in order to obtain the right to provide instruction without a term, should submit an application for a repeat assessment, together with the internal assessment report, at least six months before the expiry of the right to provide instruction. Schools that have received the right to provide instruction in a curriculum group for a specified term, but have not submitted an application to the Ministry of Education and Research, or if the minister responsible for the area makes a decision not to grant the right to provide instruction as a result of the repeat assessment, shall have its right to provide instruction terminated upon the expiry of the term.

**Internal evaluation**

In 2006, internal evaluation of education institutions became mandatory, the objective being to support the development of VET providers. VET providers regularly (formally at least every three years) conduct an internal evaluation of each curriculum group and draft a report. Since 2013, EKKA has consulted them on this process.

The internal assessment shall form the basis for preparing the development plan of a school and the assessment of quality. The internal evaluation criteria are similar to those for external evaluation: leadership and administration; resource management (including human resources); cooperation with interest groups; and education process. Methods of internal evaluation are chosen by VET providers ([51]). They often use activity and performance indicators provided in the education statistics database HaridusSilm.
The education information system collects data about the internal evaluation and feedback reports, so the ministry is able to check whether internal evaluations have been conducted and supported by advisory services. The results of internal evaluations are public but education institutions are not obliged to make them available on their websites.

EKKA provides free counselling to VET schools that support self-assessment and internal evaluation reporting. The competent and motivated teachers and school leadership programme, one of the nine programmes of the Lifelong Learning Strategy 2020 ([52]), enables training for school leaders and teachers.

[49] Comprising more than 50% self-learning.

[50] A curriculum group (e.g. media technologies) comprises curricula from related fields (e.g. multimedia; printing technology; and photography).
CHAPTER 12.

Validation of prior learning

Recognition of prior learning helps assess applicant competences against stated criteria, indicating whether these competences match education programme enrolment requirements and learning outcomes or those in occupational standards. The process helps value competences regardless of the time, place and the way they have been acquired, supporting lifelong learning and mobility, improving access to education for at-risk groups, and supporting more efficient use of resources ([53]).

The VET sector in Estonia has introduced recognition of prior learning following developments in the higher education sector. The recognition process is legally established by the Vocational Educational Institutions Act ([54]). General principles for all VET providers are set in the VET standard ([55]).

Awarding bodies, including VET providers, are responsible for developing detailed recognition procedures. Education institutions may consider prior learning when admitting learners to their programmes. Learners may also be exempt from a part of a curriculum, if they have achieved and demonstrated relevant learning outcomes. In such a case, the level of learning outcomes demonstrated can be considered as the final grade for the subject or module.

VET providers offering recognition of prior learning make public the terms, conditions and procedures that apply, including deadlines and fees. They must also provide counselling to candidates.

Successful recognition results in a certificate or diploma. Experiential learning, hobby activities or any other everyday activity are certified by reference to the work accomplished upon presentation of a qualification certificate, contract of employment, copy of assignment to the post or any other documentary proof. A description of vocational experience and self-analysis is added to the application. If necessary, VET providers may give applicants practical tasks, conduct interviews or use other assessment methods ([56]).

The lifelong learning strategy up to 2020 and its adult education programme ([57]) support the development and broader use of quality validation practices.

For more information about arrangements for the validation of non-formal and informal learning please visit Cedefop’s European database ([58])

CHAPTER 13.
Incentives for learners

Allowances, meals and travel subsidy

VET learners can apply for basic and special study allowances:

- the monthly basic allowance is EUR 60 and is available from semester two in formal full-time programmes. Around 40% of VET learners receive the allowance based on performance merit;

- a special allowance can be granted to learners in a difficult economic situation; the board of the education institution approves the procedure to use the provider’s special allowance fund.

VET providers create allowance funds (basic and special) which are financed from the State budget. The special allowance fund can be up to 50% of the resources of the basic allowance fund.

Lunchtime meals are also paid for by the State. This applies to VET learners up to age 20 who have not completed secondary education (§59) according to the initial training curricula (§60).

VET learners (§61) are reimbursed public transport tickets for travel between the learning venue and home. Dormitory residents and those who rent apartments close to the learning venue are reimbursed one return ticket to their hometown per week and an additional ticket during national and school holidays.

Study loans

In 2003, study loans were introduced to improve access to full-time post-secondary VET and on-time graduation. Secondary education graduates who wish to enrol in at least six-month formal VET programmes, can apply. Since 2015/16, part-time students have also been able to apply. In 2016/17, 1.6% of VET learners benefited from the loan (§62). Since 2018/19 it can be up to EUR 2 000 per year.

Tax exemption on training costs

Estonian residents can be exempt from income tax on training costs for programmes and courses at a State or local government education institution, or licensed private/foreign provider (§63).

Study leave for employees

The Adult Education Act (§64) provides the right for employees to take leave of up to 30 calendar days per year while in formal education or professional training. On application, the employee must present written proof of studies from the provider. During leave, employers pay the average study leave for 20 calendar days. Additional study leave (15 days) is granted for preparing for final exams; study leave pay is calculated on the basis of the national minimum wage (EUR 500 per month or EUR 2.97 per hour in 2018). An employee also has the right to leave without pay to sit entry examinations. These rights and benefits are applied in the public and private sector, in small, medium-sized and large companies.

Incentives for the unemployed

The social affairs ministry (Sotsiaalministeerium) is responsible for training the unemployed. Vocational training for the unemployed is funded by the public employment service (§65). This allocates resources to employment services to purchase and organise labour market training. It
commissions training from education institutions from State and private VET providers.

The public employment service also supports work practice placement for the unemployed through agreements. The participant continues to receive unemployment benefit and is granted a scholarship and travel compensation, paid by the employment service.

Since 2009, labour market training for the unemployed is also offered on the basis of a voucher system. Vouchers offer a quick and flexible way for the unemployed to use the resources for further training or to retrain to find a new job. The service covers up to EUR 2 500 per training for two years.

In May 2017, the public employment service launched a new package of services for unemployment prevention through continuing training and retraining. Individuals are encouraged to move to jobs that create higher added value. Typical examples are: workers who are likely to lose their jobs but could retain their employment; those without a qualification or whose skills are outdated and do not correspond to the needs of the labour market; workers with poor knowledge of Estonia; and those aged over 50. The package also supports employees who cannot continue their present employment due to health issues.

This service package also offers a study allowance scheme that supports participation in VET and in higher education. People at risk of unemployment now have access to labour market training through vouchers. In addition to direct support to employees, skills development is supported by compensating 50% to 100% of the training costs to employers. Employers can apply for a training grant to support their workers in adapting to the changes in business processes, in technology or changes in formal qualification requirements. Employers can also use the grant to fill vacancies in high demand roles by equipping potential employees with the necessary skills.

More than 3 700 people are estimated to have received this support in 2017, and around 15 000 to 19 000 annually in 2018-20.

---

[59] Excluding ‘non-stationary’ programmes, i.e. comprising more than 50% self-learning.

[61] Excluding ‘non-stationary’ programmes, i.e. comprising more than 50% self-learning.

[65] Unemployment Insurance Fund. [https://www.tootukassa.ee/](https://www.tootukassa.ee/)
CHAPTER 14.
Incentives for enterprises to boost their participation in VET provision

Wage subsidy and training remuneration

Employers are reimbursed by the State for supervising work practice for the unemployed ([66]), with a daily supervision rate of EUR 22.24 – eight times the minimum hourly wage (EUR 2.97 in 2018) ([67]) – for each day attended of the first month of training. Reimbursement decreases to 75% of the daily rate during the second month, and to 50% during the third and fourth month.

Tax exemptions

There is no value added tax for formal training; this includes learning materials, private tuition relating to general education, and other training services unless provided for business purposes ([68]).

Since 2012, enterprises have been exempt from income tax if they finance the formal education of their employees ([69]).
CHAPTER 15.
Guidance and counselling

Strategy and provision

The lifelong learning strategy up to 2020 promotes diverse learning opportunities and career services that are of good quality, flexible, and take account of the needs of the labour market. This will also help increase the number of people with VET qualifications in different age groups and regions.

Since January 2019, the Unemployment Insurance Fund has been providing career advice and career information services for everyone, including schoolchildren. The Unemployment Insurance Fund has restructured its system of career services and integrated the services of Foundation Innove Rajaleidja offered to young people into the existing career services. Counselling includes topics related to learning, workplaces and choice of specialisation. Since 2019, in addition to career counselling and the mediation of career information, the Estonian Unemployment Insurance Fund is responsible for the development of the methodology of career services, quality management, and monitoring and analytical activities. Career counsellors offer their services in all the offices of the Estonian Unemployment Insurance Fund. Career counselling is offered to everyone and the service is free of charge.

The Ministry of Education and Research is still responsible for providing high-quality career lessons in basic schools and upper secondary schools, ensuring curricula development in the field, quality learning materials, and enhancing career teachers’ skills and knowledge with in-service training. Development activities and monitoring activities are planned jointly in order to enhance the capacity of education institutions and further develop the integrity of the field of career services.

Career studies focus on the implementation of the topic ‘Lifelong learning and career planning’ in a school environment. It is important to support the implementation of cross-curricular topics in order to develop the key competences across all subjects, as a result of which students will have the necessary career skills by the end of basic school.

Career education focuses on the optional subjects offered in basic school and upper secondary school. Career education relies on the developed career competence model, the main competences of which are self-determination, acknowledgment of opportunities, planning and acting. In 2018/19 the optional career education subjects are being taught in 538 schools.

The modernisation of the national VET curricula has been in process during recent years. New curricula include the learning outcome: ‘the student understands his/her responsibility to make informed decisions in lifelong career planning processes’. This means that career management has become an integral part of VET. In developing career planning skills in VET there is a focus on self-evaluation, how best to use the learner’s professional skills in the labour market, how to keep and raise professional qualifications through continuous self-improvement, how to combine family life and work, and how to value health.

Please also see:

- guidance and outreach Estonia national report ([70]);
- Cedefop’s labour market intelligence toolkit ([71]);
- Cedefop’s inventory of lifelong guidance systems and practices ([A1]).

The Vocational Educational Institutions Act (Parliament, 2013) defines credits for VET curricula describing the time required to achieve learning outcomes. One credit is 26 hours of learner ‘study load’. The number of credits per programme and school year is 60.

### Main providers

- Information not available

### Share of work-based learning provided by schools and companies

- >=70%

### Work-based learning type (workshops at schools, in-company training / apprenticeships)

- practical training at school;
- in-company practice.

### Main target groups

Programmes are available for young people and also for adults.

Many curricula at this level, for example for assistant cleaners, are also suitable for learners with special educational needs, such as those with moderate and severe disability. Special arrangements are available for them in VET schools and social welfare institutions.

### Entry requirements for learners (qualification/education level, age)

- There are no minimum entry requirements but learners must be at least 17 years old to enrol.

### Assessment of learning outcomes

To complete a VET programme, learners need to pass a professional qualification examination, if available, that can also be replaced by a final examination. Both examinations are similar. They are learning outcomes based and usually include a practical part.

### Diplomas/certificates provided

VET learners receive a formal education qualification awarded after completion of a programme and a professional qualification that is a professional certificate verifying learning outcomes for a specific occupation or profession ([73]). We refer to them as VET qualifications and professional qualifications.
Those who have been simultaneously enrolled in general education and meet basic education requirements are issued with a basic education certificate by general education schools in addition to a VET qualification.

**Share of work-based learning provided by schools and companies**

>=35%

**Work-based learning type (workshops at schools, in-company training / apprenticeships)**

- practical training at school
- in-company practice

**Main target groups**

Programmes are available for young people and also for adults aged 22 and above.

**Entry requirements for learners (qualification/education level, age)**

Students may enter upper secondary VET if they have acquired basic education. The existence of competences corresponding to the level of basic education is required from a person without basic education and who is at least 22 years of age. Schools assess the existence of the required competences.

**Assessment of learning outcomes**

VET students receive a leaving certificate after the learning outcomes corresponding to the qualification or partial profession described in the curriculum is achieved. To complete a VET programme, learners need to pass a professional qualification examination, if available, that can also be replaced by a final examination in case of failure to pass a professional qualification examination. Both examinations are similar. They are learning outcomes based and usually include a practical part.

**Diplomas/certificates provided**

VET learners receive a leaving certificate after the learning outcomes corresponding to the qualification or partial profession described in the curriculum are achieved and also if a professional qualification examination is passed. A professional certificate will also be awarded.
Examples of qualifications
Heat pump installers and catering specialists

Progression opportunities for learners after graduation
Graduates:
- can enter the labour market;
- can continue in higher education, provided the entry requirements are met ([80]);
- can continue with an optional year of general education (bridging programme) to prepare for State examinations.
